Ask About Our Vendor Managed Inventory Systems...

Techni-Tool, Inc. has developed customized **Vendor Managed Inventory Systems** for many of our clients. Utilize our supply management expertise to reduce your cost of procurement for those ongoing consumable items. Why spend time reordering something you use every week? **Allow us to make sure you do not run out of stock.**

Whether through an automated tool crib using the Cribmaster system or a bin stock system managed by your in-house personnel, we can help you organize and track your tooling and industrial supply needs. Need to know how much you are spending on a job? We can issue, track and report spending by job, work center, department or employee. Our **VMI** system will reduce the number of purchase orders entered and the number of invoices processed.

Tool vending and tracking technology, consigned inventory, consolidated invoicing, bin stocking services...all parts of a solution to fit your needs. **We can design a system that tracks your usage 24/7 and never takes a vacation.**

Ask your Techni-Tool representative how we can customize a solution for you...
